REMARKS:

Two suspect anomalies can be seen west of the Bird's Foot of Louisiana. The anomaly on the left, is likely originating from a platform that is located to its southwest, and is approximately 0.5 miles in length. The second anomaly, which is approximately 1.0 miles in length, cannot be directly tied to a point source but there are multiple platforms in its vicinity. Both anomalies extend to the northeast, which correspond well with the southwesterly winds in the area.
