

# MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and  
Atmospheric Administration/National Environmental  
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: JUNE 06, 2014  
REPORT TIME: 1140Z (0640 CDT)  
ANALYST: VOGT MILLER

DATA SOURCE: LANDSAT-8 OLI  
MODE: Multispectral  
RESOLUTION: 30 meter  
IMAGE DATE/TIME: 6/5/2014 1625Z (1125 CDT)

## Legend

-  Possible Oil
-  False-Positives (not oil)
-  Center Point of Oil Slick:  
[ 28°51'16" N / 89°00'21" W ]
-  5.7 km<sup>2</sup> Area of Possible Oil

## REMARKS:

An area of possible oil is located about 4.6 miles southwest of the Destroyed Taylor Platform in the Gulf of Mexico. The oil has a silvery sheen on the northern edge and then feathers out to the southeast. The portion of the slick that is visible in the image is about 1 mile wide by 2.9 miles long. Due to the cloud coverage, the oil could not be traced back to any confirmed point source. Surface winds around the time of the image were fairly weak and directed to the southwest.
