-  False-Positive (not oil)
-  Center Point of Oil Slick:
[29°47'36" N / 88°34'13" W]
-  Area of Possible Oil

Confidence: Medium

Two silver and black anomalies believed to be oil
slick were detected 16 miles west of the
Chandeleur Islands. The irregularly-shaped
anomalies span across an area 2.1 miles long and
1 mile wide. Their orientation is supported by the
northward current at the time the image was taken.
There is no known point source, however, the area
contains many oil platforms.
