

MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and
Atmospheric Administration/National Environmental
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: AUGUST 20, 2015
REPORT TIME: 2100Z (1700 EDT)
ANALYST: TURK

DATA SOURCE: LANDSAT-7 ETM+
MODE: Multispectral
RESOLUTION: 30 meter
IMAGE DATE/TIME: 8/20/2015 1527Z (1127 EDT)

Legend

-  Possible Oil
-  False-Positive (not oil)
-  Torpedoed Tanker Coimbra :
[40°24'05" N / 72°22'14" W]
-  .2 km² Area of Possible Oil

CONFIDENCE: Medium-High

REMARKS:

A narrow 0.1 mile wide oil slick was detected from the torpedoed tanker Coimbra, which is located approximately 53 miles southwest of Montauk. The slick was at least 0.9 miles long, but the full extent of the slick could not be determined due, in part, to cloud cover. Skies were partly cloudy and winds were from the southeast at 10 knots at the time of the image.

Confidence is medium-high that the anomaly is oil because the Coimbra is a known repeat leak source, but the full extent of the slick could not be determined due to cloud cover.
