

MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and
Atmospheric Administration/National Environmental
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: AUGUST 20, 2015
REPORT TIME: 2300Z (1500 AKDT)
ANALYST: TURK

DATA SOURCE: SENTINEL-1A
MODE: Interferometric Wide (IW) VV
RESOLUTION: 5 x 20 meter
IMAGE DATE/TIME: 8/20/2015 1508Z (0708 AKDT)

Legend

-  Possible Oil
-  False-Positive (not oil)
-  Suspected Point Source:
[55°07'17" N / 134°13'55" W]
-  Area of Possible Oil

CONFIDENCE: Medium

REMARKS:

An anomaly was detected associated with a vessel in waters off Southeast Alaska. The anomaly was 8.8 miles long. Winds were from the northwest at 10-15 knots at the time of the image and skies were cloudy.

Confidence that the anomaly is a pollutant is only medium because there is no appreciable widening of the anomaly with distance from the vessel; and there are some lower contrast edges to the anomaly. Still, the anomaly stands out amidst homogeneous surroundings.
