

# MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and  
Atmospheric Administration/National Environmental  
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: AUGUST 29, 2015

REPORT TIME: 0007Z (8/28/2015 2007 EDT)

ANALYST: OEGERLE

DATA SOURCE: LANDSAT-8 OLI

MODE: Multispectral

RESOLUTION: 30 meter

IMAGE DATE/TIME: 8/28/2015 1527Z (1127 EDT)

## Legend

-  Possible Oil
-  False-Positive (not oil)
-  Center Point of Oil Slick:  
[ 39°39'08" N / 72°35'08" W ]
-  .8 km² Area of Possible Oil

## CONFIDENCE: Medium

An anomaly was centered 103 miles southwest of Montauk. This narrow anomaly measures 2.8 miles in length with an orientation consistent with surface winds of 10 knots.

Confidence that this anomaly is a pollutant is categorized as medium because it is not connected to a point source, but there is a documented non-RULET shipwreck (NOAA Electronic Navigational Charts) located 0.5 miles NW of the easternmost point of the slick. Anomalies were detected in this same area on the 19th and 20th of August.
