

# MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and  
Atmospheric Administration/National Environmental  
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: DECEMBER 09, 2015  
REPORT TIME: 2300Z (1700 CST)  
ANALYST: BOLL

DATA SOURCE: LANDSAT-7 ETM+  
MODE: Multispectral  
RESOLUTION: 30 meter  
IMAGE DATE/TIME: 12/9/2015 1627Z (1027 CST)

## Legend

-  Possible Oil
-  False-Positive (not oil)
-  Destroyed Taylor Platform :  
[ 28°56'9" N / 88°58'12" W ]
-  9.3 km<sup>2</sup> Area of Possible Oil

**CONFIDENCE: Medium-High**

## REMARKS:

A meandering anomaly extended 20 NM from a known repeat leak source. An outline of a suspected sheen was observed with an approximate width of roughly 0.2 NM.

Wind speeds at the time were 5 knots and variable. Modeled ocean currents were under 0.5 knots.

Confidence is Medium-High given the location to a known repeat leak source within the vicinity. The surroundings are homogeneous and the anomaly appears out of place.
