

MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and
Atmospheric Administration/National Environmental
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: JANUARY 28, 2015
REPORT TIME: 0125Z (1/27/2015 1925 CST)
ANALYST: SALEMI

DATA SOURCE: LANDSAT-8 OLI
MODE: Multispectral
RESOLUTION: 30 meter
IMAGE DATE/TIME: 1/28/2015 1651Z (1051 CST)

Legend

-  Possible Oil
-  False-Positive (not oil)
-  Suspected Point Source:
[26° 7' 46" N / 94° 53' 51" W]

1.75 km² Area of Possible Oil

CONFIDENCE: Medium-high

REMARKS: Possible oil was seen in satellite imagery in the Alaminos Canyon Lease Area. The origin of the sheen appears to be the oil producing facility in the southwestern corner of Lease Block 857. There are two other areas of possible oil which may be associated with this facility in blocks 856 and 900. The appearance of the sheen has feathering consistent with wind direction and the overall orientation of the sheen agrees with ocean currents.
