

MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and
Atmospheric Administration/National Environmental
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: JULY 08, 2015

REPORT TIME: 0101Z (7/7/2015 2001 CDT)

ANALYST: JANKOT

DATA SOURCE: TERRA MODIS

MODE: Multispectral

RESOLUTION: 250 meter

IMAGE DATE/TIME: 7/7/2015 1700Z (1200 CDT)

Legend

-  Possible Oil
-  False-Positive (not oil)
-  Destroyed Taylor Platform :
[28°56'9" N / 88°58'12" W]
-  4.2 km² Area of Possible Oil

CONFIDENCE: Medium-High

REMARKS:

Possible oil is connected to the Destroyed Taylor Platform, a repeat leak source. Anomaly extends to the east northeast from the suspected point source for approximately 3.5 miles. Anomaly appears lighter than its surroundings, but is out of sunglint conditions lowering confidence. Modeled ocean currents were weak at the time of the image and surface winds were out of the south at 5-10 knots at the time of the image. Confidence also increases as NRC report # 1122072 suggested a sheen could be seen.
