

MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and
Atmospheric Administration/National Environmental
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: JULY 11, 2015
REPORT TIME: 0115Z (7/10/2015 2015 CDT)
ANALYST: TURK

DATA SOURCE: LANDSAT-8 OLI
MODE: Multispectral
RESOLUTION: 30 meter
IMAGE DATE/TIME: 7/10/2015 1625Z (1125 CDT)

Legend

-  Possible Oil
-  False-Positive (not oil)
-  Suspected Point Source:
[28°02'02" N / 89°06'03" W]
-  .2 km² Area of Possible Oil

CONFIDENCE: Medium-High

REMARKS:

An anomaly extended 1.3 miles to the northwest of an oil facility and was roughly 0.07 miles wide. There was some suggestion that the anomaly may extend a bit farther northwest before turning sharply toward the northeast, but a break in the anomaly was used as an end point.

Confidence is medium-high because the area lies outside of sun glint and there is no known or reported spill in the vicinity. Skies were clear and winds were from the east at 10 knots at the time of the image.
