

# MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and  
Atmospheric Administration/National Environmental  
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: JUNE 10, 2015  
REPORT TIME: 2130Z (1630 CDT)  
ANALYST: KEMAL

DATA SOURCE: TERRA MODIS  
MODE: Multispectral  
RESOLUTION: 250 meter  
IMAGE DATE/TIME: 6/10/2015 1720Z (1220 CDT)

## Legend

-  Possible Oil
-  False-Positive (not oil)
-  Suspected Point Source:  
[ 29°32'10.766"N / 93°46'49.921"W ]
-  Area of Possible Oil

**CONFIDENCE: Low**

## REMARKS:

The anomaly seen in the image has a signature that is very similar to oil, but due to the coarse imagery and lack of sunglint, we are unable to increase our confidence level to issue a formal report. It is directly connected to one oil facility but there are many more in the vicinity causing uncertainty in the exact point source. The orientation of the suspected oil is supported by the southwesterly winds. The anomaly is 2.6 miles in length with a maximum width of 0.5 miles, plus or minus 250 meters in either direction due to the coarse spatial resolution.
