

# MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and  
Atmospheric Administration/National Environmental  
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: MARCH 20, 2015

REPORT TIME: 0443Z (3/19/2015 2343 CDT)

ANALYST: RAMIREZ

DATA SOURCE: ASTER VNIR

MODE: Multispectral

RESOLUTION: 15 meter

IMAGE DATE/TIME: 3/19/2015 1650Z (1150 CDT)

## Legend

-  Possible Oil
-  False-Positive (not oil)
-  Destroyed Taylor Platform :  
[ 28°56'9" N / 88°58'12" W ]
-  1.6 km<sup>2</sup> Area of Possible Oil

**CONFIDENCE: Medium-High**

## REMARKS:

Possible oil slick is observed extending southeast from a damaged oil facility. The slick is approximately 7km in length and 0.3km in width. The edges of the anomaly are not very sharp, due to enhancement of the image to make the oil better distinguished from the ocean background - And as such, it is possible that this is a conservative estimate of oil extent. No other uncertainties exist.
